 NUNNE, an; *f.* [*Plat. nunne f. Dut. non f.; Ger. nonne f.; Dan. nonne, nunne f.; Swed. Icel. nunna f.; Fr. nonne f.; Sp. Port. monja f.*] This word is old and was used by *St. Hieronymus* to designate a nun. *Vassius* thinks it is an *Egyptian* word; signifying a virgin; others derive it from the *Grk. νουvis, vovva a nun*; but being in earlier time a title of respect, given to old people, this derivation is not sufficient. Nonnones or nonnanes was in the *Lat. mid.* the name for old poor persons, provided for or maintained by the Church; *Papias* says, "nonnos vocamus majores ob reverentiam, nam intelligitur paterna reverentia;" and in the rule, or Institution of *St. Benedict* it is said, "Juniores autem Priores suos nonnos vocent, quod intelligitur paterna reverentia." In the same manner as old venerable monks, out of respect, were called *Patres fathers*, they also received the title Nonnos, and the old sacred virgins nonnas, and both together in the *Latin* of the middle age, were named nonnones and nonnanes. This word was often prefixed to proper names; as for instance, Nonnus Fridericus monachus.  penniga, panniga to pay.—
 Mr. Turner observes, if we
 consider the Saxon peneg as
 their only silver coin, we may
 derive the word from the verb

punian to beat, knock] 1. A
 PENNY. The silver penny
 derived from the Roman den-
 arius, was the standard coin
 in this country for more than
 a thousand years. Saxon mo-
 ney was sometimes reckoned
 by pennies, as the French
 money is now by livres. *Mann-*
says, "the Saxon penny
 was equal to 8 pence of the
 present currency," but if a
 mancus (v. mancos) be 6
 shillings or 72 pence in our
 money, and only 30 Saxon
 pennies, it follows that a
 Saxon penny was not quite
 2½d. This was the greater
 penny, 5 of which made
 a shilling. There was also
 a smaller penny, about the
 value of our present pen-
 ny, 12 of which made a
 shilling; denarius Anglo-

Sund, es; s. [Plat. Dan. Swed. Icel. Mæs. pund n: Dut. pond s: Ger. pfund n: Not. phunt, phunt; Ker. Pol. Hung. funt. In earlier times all silver and copper money was weighed, hence the appellation pound] 1. A pound weight; pondo, libra. 2. A POUND, a quantity of money; mina, v. mancos]. 3. A talent; talentum. The Saxon pound was used as an imaginary value of money, but there has been a variety of opinions about its value. We have proof, from Domesday, that in the time of the Confessor it consisted of twenty solidi or shillings. But Dr. Hickes, Dis. Ep. p. 111. contends that the Saxon pound consisted of sixty shillings, because, by the Saxon law in Mercia, the king's were-geld was one hundred and twenty pounds, and amounted to the same as six thegns, whose were was twelve hundred shillings each, L. Wilk. p. 72. And certainly this passage has the force of declaring that the king's were was seven thousand two hundred shillings, and that these were equivalent to one hundred and twenty pounds; and, according to this passage, the pound in Mercia contained sixty shillings. Other authors, as Camden, Spelman, and Fleetwood assert that the pound had but forty-eight shillings:—1. An pund deorwyrðre þalfe, Jn. 12, 3. Pund butran gewiðð LXXX penenac læsse þonne pund wæres, W. Cat. p. 179. 2. Dyn and gestryfde tyn pund tua tina lucrifecit decem minas, Mt. 19, 16. Nimað þæt pund fram hym, and sylfað þam þe

Its signification was formerly far more extensive than at present, and like reisen expressed generally any change of place without mentioning the manner of conveyance, which was expressed by the preposition auf on, in. Like the English and Dutch, the Ger. in earlier times used the expression, to ride in a coach, Ger. auf einem wagen reiten instead of the modern fahren vehere.  Louis and Lothar of the ninth
 century, sachu signifies landed

Swed. sak f: *Icel.* sök f. court
 of justice, jurisdiction, a law-

 word has been a stumbling-
 block for nearly all eymolog-
 ists. *Adel.* considers it as
 the intensive of the Ger. sage f.
 a saying, a talk, and sagen to
 say, signifying originally a
 clamour, dispute, quarrel;
 and, in a more extended sense,
 any kind of speech and its
 object. *Synonyms* in the Ger.
 and other languages confirm
 this derivation. The Ger. ding
 thing signifies, in its most
 extended sense, all that is
 existing; but, originally it
 designaed altercation, cavilling,
 wrangling, as well as speech in
 general. The Lat. causa is
 derived from causari. Ger.
 klagen to complain, which, like
 the Ger. kûren and kûsen, in
 earlier times signified in gen-
 eral to speak. The It. cosa,
 and the Fr. chose, derived from
 causa, signify any matter or
 anything. The Lat. res be-
 longs to the root of the Ger.
 rede speech, recht right, raus-
 chen to rush. *Kero* translates
 res by rachono, which antiqua-
 ted word belonging to the Ger.
 rechen, reden is the root of
 Ger. rechnen to calculate. The
 Old *Swed.* sak, the *Icel.* sök f.
 signifies both crime and im-
 peachment or punishment, and
 Tat. uses sahba to designate a

crime, *Adl.* 1. Strife, conten-

nifies taxes, tribute; Mons.

m. a treasure, tax; Icel. skattr
m. a tribute.—sceat a part,
division] 1. Money, price, gain,
tribute, treasure, gift; pecunia,
thesaurus, lucrum, munus.
2. A definite quantity or piece
of metal in an uncoined state,
about the value of our penny.
In the time of Ethelbert the
scæt was the twentieth part
of a shilling. His laws en-
join a penalty of twenty scyl-
lingas for the loss of the
thumb, and three scyllingas
for the thumb-nail. It is
afterwards declared that the
loss of the great toe is to be
compensated by ten scyllingas,
and the other toes by half the
price of the fingers. It is
immediately added, that for
the nail of the great toe
thirty sceattas must be paid to
bot, L. Ethelb. W. p. 6.—About
three centuries later, the scæt
appears somewhat raised in
value, and to be like one
of their smaller pennies; for
the laws of Ethelstan declare
XXX þusend sceatta, and þat
bið ealles CXX punda thirty
thousand scættas to be 120
pounds, L. Lund. W. p. 72, 10.
This gives two hundred and
fifty sceattas to a pound, or
twelve and a half to a scyl-
ling. Perhaps, therefore,

the sceat was the smaller penny, a little less than the value of the present English penny; and the pening, properly so called, was the larger one, the intrinsic worth of which was about 2½d., v. peneg. The sceat and scylling seem to have been the names of the Saxon money in Pagan times, before the Roman and French ecclesiastics had taught them the art of coining, v. *Mr. Turner's Hist. of A.-S.* vol. ii. p. 474: *Monetae Anglo-Saxonicae species*:—1. sq], skel to weigh: *Lat. Mid.* siclus: *Fr.* sicle the fourth part of an ounce, and observe that payments were originally made by weight, as they are still in some countries. Junius refers shilling to the old skella to sound. He pretends that all thicker coins were called shilling in opposition to the coin made of thin plated metal, or bracteates, which had no sound. *Wach.* thinks that the *Moes.* skula reus, the *A.-S.* scyldig is the root of shilling, originally used for a fine. Other etymologists derive this word from the *Ger.* schild shield, and thus shilling, or rather shilling, would signify a coin stamped with the arms of the prince, or any other person who has the right or privilege of coinage. *Frisch* derives shilling from the *Lat.* solidus. *Ihre*, whose views *Adelung* most approves, thinks that the original signification of shilling is the *Ger.* scheide mtinge small money, *Swed.* skilje mynt, *Dan.* skille mynt. This opinion is confirmed by the circumstance that the oldest larger coins were marked by a deep stamped or impressed cross, in such a manner that they could be easily broken into two, three, or four pieces; the different value of shillings is thus easily explained.—*scylan* to divide, or sceale a balance, scale] 1. The *Zittavian chronicles* call churchwardens and vicars step-fathers; and the *bridemaid stiefchwester* de-braut step-sisters of the bride, which favours the opinion of *Frisch*. *Adelung* thinks the stief signifies something genuine, in opposition to the genuine and true; but he confesses that, from the great obscurity of this word, its derivation is very difficult. *Jens* with whom *Thre* agrees, says this word in the most rare manner to the A.-S. steopa, and the Old Ger. steifan bare; to which the *Icel.* steopuldrar, priore; may perhaps be added.—A.-S. cild) A **STEP-CHILD**, aphan; orbatus parente, c. phanus, pupillus, *Ex. 22: Deut. 10, 18.*

TIL, tille [Frs. til till, until:
Swed. till till, until: Dan.
Icel. til, ad, in, nimis. Dr.
Grimm, in his Deutsche Gram-
matik, vol. ii. p. 767, observes,
"The Old North. til ad; Dan.
til; Swed. till, a separable
particle, is peculiar to the north-
ern dialects; for it is not iden-
tical with the Goth. du, the
Old high Ger. zi, zuo, the A.-S.
to, &c. Til always governs the
g. case, while du and zi in gen-
eral govern the d. and never
the g." Dr. Grimm remarks
further that the Eng. until
donec, usque, though Old Eng-
lish, (and not A.-S. which uses
oð) appears to be a real Dan-
ish. Dr. Grimm's affirmation
that til always governs the g.
is not quite correct, for in all
the northern dialects til gen-
erally governs the ac. and only
sometimes the g. If the A.-S.
example cited below, on the au-
thority of Som. be admitted, it
disproves Dr. Grimm's asser-

TYN, ten, tin [Plat. tien: in Hanover, tein: *Dut.* tien: *Fra.* tian: *Ger.* zehen, zeh: *Old Ger.* zehun, zehun. *It.* cin: *Moes.* taihun; *east* in compound words, taihund, taihund ten: *Dan.* ti: *Swed.* tatio: *Icel.* tiu. Jökul, is the German Origin of the Lat. *cent* p. 98, *The origin of Ger. zehen, Lat. decem, is the best explained by the Old Ger. and Moes. tai hund or hend; the*

is the old article thai the; and hand, hend hands, both the hands or ten fingers, by which they numbered or counted, as children still do. Thus originated our decimal system. The Roman numerals seem to allude to this origin. V represents one hand expanded; X represents both the hands. From taihend, the Ger. formed ten by contraction, which afterwards, by their predilection for hissing sounds, was changed in zehend, zehen ten. In Lat. the deep guttural h, changed into c or k, and thus formed decem. All the other numbers can be explained in the same manner, if we consider that the old c was properly the Grk. γ, and thus easily changed into g. It is for this reason that we sometimes find vicesimus and vigesimus. Thus the Lat. vi-ginti: Teutonic, twig-ti-gunds or honds two times the hands, twenty. In some old inscriptions viginti is written biginti; in Teutonic twins-ti-gund twenty. Trigint-a, Teutonic trins-ti-gondisthree times the hands, thirty, &c. Centum, cent. in Teutonic, taihend, tehund ten times the hands, or 10×10=100. By the quick pronunciation of this long word, the first syllable was easily passed over, and the last contracted; thus by adding r, the Ger. hundred, Eng. hundred, were formed.—Tooke gives the following derivation. —tyu included, concluded, from ynan to enclose, shut in; because with ten numeration is loosed, and a new series commences; as, ten and one, ten and two] TEN; decem:—Gif ær beoð tyn, Gen. 18, 32.  WER, were, wera, es; m. [*Frs.* wereld n: *Ger.* webrgeld n: *Old Ger.* wer, were] *A fine for slaying a man, the price or value of a man's life*; *capitis aestimatio sive pretium quo vita cujusque apud Anglo-Saxones pro vario suo statu, ordine, et conditione censebatur*. Every man was valued at a certain sum, which was called his *were*, and whoever took his life was punished by having to pay this *were* to the family or relations of the deceased. The *were* was therefore the penalty by which his safety was guarded and his crimes prevented or punished. If he violated certain laws, it was his legal mulct; if he were himself attacked, it was the penalty inflicted on others. Hence it became the measure and mark of a man's personal rank and consequence, because its amount was exactly regulated by his condition in life:—Gif his wer biþ twelf hund scil if his were be 1200 *shillings*, *L. ° In expressing the sounds of *th*, the Anglo-Saxon orthography was more consistent than the present English. We now use *th* to represent two sounds, as heard in the words *thing* and *smooth*; the Anglo-Saxona, with greater propriety, used two distinct characters to denote these two separate sounds. The *hard* or *sharp* sound of *th* heard in *thing* is represented in Anglo-Saxon by Þ, þ *th*; and the *soft* or *flat* sound, as found in *other*, *brother*, is denoted by Ð, ð *dth*. Þ or þ *th*, representing the hard or sharp sound, is used in Anglo-Saxon at the *beginning* of words and syllables; as, þing *thing*, þepencan *to bethink*. Ð or ð *dth*, denoting the soft or flat sound, is employed at the *end* of words and syllables; as, aðð sooth, bróðer brother. This is the plan adopted in the present work. As the scribes of the more recent Anglo-Saxon MSS. have not been very precise in the use of þ *th*, ð *dth*, it will be desirable to show the reasons by which the sounds and the use of these characters have been determined.

It is evident that þ *th* is the *hard*, and ð *dth* the *soft* sound; 1st, Because as Ð is clearly taken from D, it is most probable that Ð represented the sound which comes nearest to D: it is also evident, on the other hand, that þ, as well as the Icelandic Þ are taken from the Runic Þ, and, therefore, it probably denoted the same hard sound. 2ndly, Because ð *dth* is found so frequently at the end of a syllable, and between two vowels, where the softer sound is still retained in English, and where, according to the old orthography, ð *dth* is found in Icelandic and in Ger. and Dan. a mere *d*; as, aððre, Eng. sooth, and Icel. aððir; aððre, Eng. others, Icel. aððir: A.-S. bróðer, Ger. brother: Ger. bruder: Dan. broder.

On the contrary, þ is found most at the beginning of words, where the Icel. has always the hard sound; as, þeod *people*: Icel. þjóð; þencan *to think*: Icel. þenkja. Þ, þ. Hanc litteram proprie reor pronuntiandam ut Græcorum Θ in Θεος, et Anglorum th in thing; Ð, ð, vero ut Angli th in smooth, &c. Sed confunduntur hi characteres a scriptoribus.

Anglo-Saxon words ending in -ð, -uð [Eng. th: Ger. Den. Sued. -d, -t: Icel. -ð] are all of the feminine gender; as, myrð *mirth*; treowð *troth*, a covenant; yrmð, *misery*; geoguð *youth*; gesyhð *sight*, &c.

1. Generally A servant, an attendant; servus, minister. 2. It was then used to denote a particular attendant, as A disciple, scholar; abijt tandem generalis hæc vocis significatio in particularem, ut per eam denotaretur etiam Christi serrus, discipulus. 3. A soldier, knight, a military honour; servus militaris, miles, satelles, eques. 4. A servant of the king, A THANE, nobleman, Baron. A king's Thane, an Anglo-Saxon nobleman, was inferior in rank to an eorl and ealdorman; he was afterwards denominated a baron, *L. Wilk. p. 250: 276.* There was an inferior Thane in the Conqueror's

time, called a knight, who attended the king's Thane or Baron. The rank of a Thane, as well as the other titles of dignity among the A.-S., was not inherited, but was personal, hence it was attainable by all, even by the servile; but, before any one could be elevated to the dignity of an inferior Thane, he must be in possession of five hides of his own land, a church, a kitchen, a bell-house, a judicial seat at the burgh gate, and a seat in the witenagemot. Whoever by his industry and talent obtained these, became a Thane by right, *L. Const. Ethel. The word seems to imply the mountain deity;" but it may be from Heb. ׀ר tr, thr, thor to go round, circulate; hence Thor who presided over the heavens in circulation. Thor, being the most powerful of the gods, was set in the midst, and higher than the rest; formed like a naked man, holding in his right hand a sceptre, and in his left seven stars or planets. He presided in the air; caused thunder, winds, showers, fair weather, &c. On the fifth day of the week sacrifices were offered to Thor, that he might protect the people from thunder and storms. SUPPLEMENT,

CONTAINING CORRECTIONS AND ADDITIONS.

ANY of the words in the Supplement are from *Som. Ben. Lye*, and *Mann*, the orthography and meaning of which are given solely on their authority. Such words were previously omitted, as a reference sanctioning their use could not be discovered. They are now inserted, with the view of supplying every assistance, as they may possibly have been found in this form by these Lexicographers, though it must be confessed that some of them appear to be only infinitives and nominatives improperly formed from other words. The inflection and meaning of all other words are confirmed by precise references.

In addition to the list at the end of the Preface, the following contractions and marks claim especial attention in the Supplement.

-dl denotes that the *preceding word or words*, from the commencement of the article, or paragraph, from *-*, are to be erased.

dl- that the *following word or words*, to the conclusion of the article, or to *-*, are to be erased.

* that the *word or words immediately following* are corrections, and that, therefore, the printed work must be corrected to accord with what follows the asterisk.

l with a numeral following, denotes the *line* from the commencement of the article or paragraph.

Thus: *p. x. l. 18*, *Getæ* or *-dl* denotes that in page x. line 18, the words *Getæ* or are to be erased. *Eddra, ædra -dl*. * *Æddre, ædre*, an; *f. a vein, drain*, etc. shews that *Æddra, ædra*, found in the alphabetical order, are to be erased, and the words following the asterisk are to be substituted in the Dictionary. *Ab* * *the woof*; denotes that *the woof* must be substituted in the Dictionary for the erroneous explanation *a beam*. *Æfen-tid, l. 4*, *Seo* * *æfen-tid*, shews that in the 4th line of this article, the notation must be *Seo æfen-tid þæs*, etc. and not *Seo æfen-tide*. *Æra, l. 4* * *Former*, denotes that in the 4th line of the article *Æra*, *Formerly* must be altered to *Former*.

p. x. l. 38, *Getæ* or *-dl*.
p. xiv. l. 4, the chief * writings which are a translation of Sidore, and of Willeram's *Canticorum*, v. p. cxxiii. 6, 4.

p. xvi. l. 15, to leave * Anglen.
